

## Phlossary round 1 - 3

Well this seems to have escalated quickly, yes. Been trying to really wrap the ole noodle around this stuff more and more, and have been feverishly jotting down things that stand out to the ear and maybe relevant to what is going on in this area of research. That said I'm not more than a chapter into collective electrodynamics {done with it now onto modern thermodynamics} trying to learn on both science end and what has been picked up intuitively along the way.

Massive props and love to Dave Rossi for leading the charge on the path he is on. In my opinion the mere openness to these things is a huge first step, personally the part about being able to put it together from a person viewpoint or unique way specific to the individual. Started with only a few terms that I was hoping to share, and or fix if I am was wrong, which is and will be the case as long as I can stay aware of the fact. Also encouraging is that there seems to be a few other people that see the potential of usefulness that a kaleidoscope of valid { hopefully all coherent and or not muddy perception}

Went way above what I had originally thought for conceptually based idea but still rooting out the fundamental parts on our ends. These are the one that stood out to me extra focus wise. Absolutely maybe bit off more than I can chew but with some refinement and or collaboration I think that perhaps the ice can be broken around the z pinch area [Aether/ ether/ zpe/ free energy, whatever you name it.]. For sure don't want to convey any sense of being any sort of pro, hopefully someday but not yet. Ok lets see if I was trying to go too hard or it marinated to just the right flavor?

## Phlossary third edition?

Alcubierre warp drive - next level / ag mode; spot in front of drive becomes bent to spot behind the drive, then pulling magnetic field back into drive core and repeat; double bubble [specifically designed to shield inner components and or passengers I think]; similar to yin yang type wave form/ ripple in spacetime pattern

Threshold - personal bar of interactional high water if you will, preset construct of the phenomena; ability or ah-ha or experience that unlocks a new set of ideas or principles ; example , some reason you see a zero point device , your threshold to see it or something similar or lower amplitude would be set or increased even perhaps

Angstrom level - {heard from Dan Winters thats where Planck vortex occurred and it inspired me to look at ways to increase the spread of photons}; micron level of lock required for precise phase conjugation ; down to a micron / mili micron / small small small

Toroid - toroidal / torsion - donut; the shape and or motion created from magnetic field; also seems to be key with secret sauce factor / first second order on z pinch as I see it; resistance coil caduceus

Implosion - {Dan Winters constantly saying the cause of gravity} center peanut of dual phase lock diagram; conjugation point/ action; overtly meaning opposite of explosive; inward charge flow pattern

Dipole - magnet variety; dual pole as name suggests; results in non magnetic atom as a result of spin

Monopole - magnet variety; single pole [ + or - ]; results in a magnetic atom from spin { as I see it because draw to complete set of positive and negative} ; free range atoms

Neutrino - ghost particle - invisible particle that moves [ naturally undetected ] through all matter in known universe; allegedly methods to detect with certain array; also similarly , allegedly ways to alter or utilize the same array to change or manipulate same particles; base piggyback layer for z pinch occurrence / highway of non physical; activated etheron particles

Double bubble - Dirac move, inner zone or bubble is protected atmosphere from external field; Alcubierre warp bubble would be a demonstration of this concept

Zap - physical interaction of z pinch effect; visual manifestation of charge collapse, an example would be the bubble that materializes in the footage associated with the missing Malaysia flight

Longitudinal wave - vertical concentric rings; eddy currents; Berkshire currents; exist everywhere; cannot be broken/ can be bent; as I see it its the waiting room of potentials as well

Spin Resonance - when a lock in occurs with a secondary position/ object; either external or internal particle spin syncs or locks with second magnetic field to create a resonant effect / phase lock [?]

Anti-spin Resonance - when an unlock of dual magnetic fields occurs; either external or internal particle spin un syncing or unlocking the coherence to disrupt resonance of / separate the unity into multiple fields; example hitting a high pitch and glass shatters

Scalar - speed of wave/ speed; waves that run transverse ( in my head I picture dna strands) to conventional em waves by one oscillation level/ spin, by one

parallel to direction of propagation , making them appear or similar to longitudinal waves; spin rate on longitudinal rip, or magnitude ; compression wave; torsion wave; only dealing with magnitude , leaving out directionality; example of visual reference point I think would be the ghostbusters proton beam, the longitudinal is the main beam, scalar would be the purple and red amp up side beams I believe

Model G, Vertical Vortex - Dan winters term\* - describing I believe the interaction of 2 upward and downward tornados to create wave collapse/ harness negentropy of both energy peaks

Vertical Time - spin rate of given variable in units of perpendicular measurement / longitudinal wave tracking; no beginning and end; awareness of cyclical aspect of time; in the analogy of time being a calendar, the year maybe a good example

Horizontal Time - spin rate of given variable in units of perpendicular measurement / vectoring wave? ; linear time sense; there is a before/now/after in horizontal time; in the analogy of time being a calendar, the month or day perhaps as a good example

Hyperboloid - double phase lock/ quadric / 4 wall non cone with a center pinch or focal point, also an intersection of numerous planes or maybe a cross reference of densities (?) 3 pair groups of axis and 3 pair groups of planes; ' the most complicated' of quadric surfaces; a map out on 2D of higher symmetry movement; surface tension of / generated by hyperbolic torsion/ surface of hyperbola

Hyperbola - re z pinch symbol { repurposed frown symbol <^>} but only one set however, if that makes sense. Symmetrical parallel planes with fractal point, the point of which being functional in time space on higher density planes perhaps

Spin 2 - Bose condensate spin condition ( this one is still a tad squirrelly for me) 2 units of angular momentum/ dual 90\*s; utilization equates to massless positive particle of graviton ; arises from base state of a spin 0 is the claim; gauge in variance

Vortex Spiral Dynamics - Fluktuation point of double vortex of/ and or around a z-pinch; thing of aiming two tornados landing focal point on a Brussel sprout , and working with the force exerted on said Brussel sprout; possible also with single hurricane [ see pictures of piece of hay through a tree]

Magneto Hydro Dynamics - MHD - em method of engineering longitudinal wave utilizing interaction, for either/ any repurpose within the electro spectrum [ i.e. not the Alcubierre method/ spacetime local] , also described as super fluid or electroconductive space of multiple particle origin merging into continuous medium; doped water harnessed to tap z-pinch effect and or water with em effect stacked

onto it

Graviton - expresses itself as either a particle or a wave [ debated, possible distraction technique or obfuscation] longitudinal particle expressed as a wave , (phonon, photon and gravity being 3 types of/ types of particle flavors); carrier particle of force of gravity; zero charge; quantized particle of gravity; coupling with all ' known' objects/ matter

Turing Waves - Emergent (or 2nd order?) decentralized exchange process; resulting effect of chemical Reaction and diffusion; spacetime to spacetime zero point, the frequency of which dictates reality; viewed also as an expression of longitudinal waves; universally constant; exists below Planck scale; coherent structure of plasma propagation; dodecahedron that in-folds on itself

Sub-Quantum Level - underlaying or preexisting (in terms of of observable state) realm of potentials; single nodule of multiple untapped levels before quantum interaction/ observable state; ( maybe I'm off here) 1st order , where 2nd would be quantum or the out come of the dual slit?; also perhaps Planck level or better, condensate, time crystal etc

Scalar Resonance - ghostbuster proton pack analogy, would be when the beams amplitude gets adjusted to match up with the ghost and lock in; in phase lock with outside force/ energy to induce an effect of modify secondary field or attune into symmetry; mass > weight lock method; non vectored

El Yin Yang - cosmic cycle. Light int the dark and dark in the light; ancient depiction of fractal balance; magnetic flow chart; a visual representation of as below so above or both as below so above and as above so below; x marks the spot zen map

Biophoton - indépendant of regular photon/ separate state for run of the mill photon; biologic systems production in the ultraviolet and low visible light spectrum; info packet for sending or transferring between two locations; cellular luminescent particle/ singular; not to be confused with process which is know as biophotonics (?); acts almost in same manner as laser

Electro Culture - methodology of utilization of biophoton to enhance/ change structure of DNA in effective range/ given area; working with an electrical modification oscillation or field that interacts with plants, various methods to get this to happen, perhaps Stonehenge or copper rods garden moves that studies have shown to support growth rate / foliage variances

ET - Extra Terrestrial / Extra Temporal - reference for intelligent beings that have all reportedly or simultaneously [ depending on who you ask or what reality

structure your at ease with] origin of either , in my opinion, man made, has always existed / exists outside spacetime or only in timespace and off planet varieties ; for example say there is a saucer that has always been there for and will be there for infinity, one that was from lets just say mars and one that for fun, we will say Jamaica made, all being similar but vast differences in capabilities I believe

Frame Drag - old school camera style picture distortion effect; term used to describe phenomena where there is a blurring or obfuscation of desired object/ image; personally came to point where I think the camera can't handle the time dilation occurring and is ' confused ' about which part of past/ present / future all being observable at ' one time ', all time , if that tracks and or isn't confusing for an example

Superluminal - Anything moving faster than the speed of light ; against laws of physics [ side theory , there is a mark just beyond light speed that is bad news bears to stay in/ won't survive I believe]

Coherent Longitudinal Interferometry - { Dan Winters term for me anyway} use in reference to shareable wave function; meaning upward scalar lock with larger inhabitable array process ; (not much to speak of on other sources personally leads me to think both there is something to this and its been scrubbed)

Charge Collapse - sighting / quote Dan Winters as the cause of gravity; what holds a planet/ planets/ plates/ planes together; perfect Planck scaling; perfect charge distribution; recursive implosion inward

90\* / rock the 90 - break the symmetry; disrupt the flow of circular momentum at exactly ninety degree angle; ninety or more specifically dual 90\* ( or 180\* but I don't want to get too woo on my numbers meanings) kept showing up in info being presented , relevant to inducing z-pinch , finally stuck in my head as important factor; started to use it in conversation in reference to such, and it kinda stuck for me

Bandwidth - amount of available information transference and or/ retention available to given capacitor; also used in reference to how much attention one has at any given point; also originally in reference to Hz wave and size of frequency modulation

Solfeggio / Solfeggio Tones - audio equivalent/ version of golden mean (I think); sacred method of tonal incremental scaling; fractal overlay up and downward on harmonic scales; also variations in cymatic patterns and different tie ins to to health benefit effects, stimulate brainwave activity or adversely help ease tension [not medical advice] ; uses fibonacci sequencing

Golden Ratio - instantly visualize the classic seashell ratio picture from grade school; used to describe factuality, either direction; Dan Winters sights golden ratio perfected charge collapse as the base equation/ action of the entire universe; golden mean is another name; only solution to include both the arithmetic means and geometric mean; numerical representation : 1.618 ( or 1 to 1.618 more specifically)

Quantum Flux - total S.o.b. ; variable of insurmountable force; one way to digest dual slit in my opinion; indeterminate by public science factor at play making what would appear to be random on/ off positions; example , have the same experiment, same layout and everything , get two and/ or infinite results or variations of working vs not working

Kinetic Learning - Massive Shout to Brandon Thomas for laying this one down ; seeing via hands on how something works; movement based approach to adapting new skills; ill throw myself out there as an example, of getting a better handle on zed territory/ phlossary town after trying a couple lasers and a prism myself, maybe bad example but to my mind it counts as kinetic learning

Rager - To burst forth with vigor; having almost hazardous levels; extra double spicey; also adversely used to describe someone who is super angry

Bio-Architecture - methodology of utilizing architecture to induce variance in frequency of resonant effect in the building or in building / area and/ or surrounding areas; used for example it is believed, in combination with church organs or chanting to stack or induce different effects; another example I think would be stone henge or the pyramids of Egypt ( or any of the old pyramids around the world I think ); also the massive stone obelisks around too, personally the older the better functioning I think

Fractality - gosh this is wide application term [ Imo] the term referring to every smaller iteration being equal or proportionate to the whole and upward/ outward, scale wise or specially speaking; also commonly known as expression of golden rule [ imagine flashing mind of older screen saver with geometric tie dye looking pattern of itself into itself into itself...] ; applicative to ( again in my opinion) music , mathematic, spiritual perhaps, and depending on what school you attend, consciousness ; also the cause of gravity

Phase Conjugate Golden Ratio - phase locking mechanism; dual vector golden ratio pinecones [ Dan Winters giving breakdown and this aspect clicked ] whereas an adjustment there in of ratio , while phase locked, would as I understand it, change output of effect derived and long as lock wasn't broken and golden ratio was maintained

Coherent Longitudinal Array - { Dan Winters Term/ where I heard it originally} a cluster of interconnected and interactive waves; with nodes of interlaced connectivity ; astral projection requires an idea like this to be rudimentary , as I get it; super massive black structure out in deep space would also need this mechanism to operate as some form of unity or forms an longitudinal net to connect to and/ or receive from; another name is the Akashic record maybe

Gravity Diode - [ Dan Winters and new somewhat to me but light bulb went off] seems to be in regard to a z-pinch node that would have both positive and negative fields. Thats current best guess anyhow; presumably there would have to be a gravity monopole as well I believe

Harmonic Inclusiveness - vibration or resonance process that restores or reinvigorates from one system to another; frequency shift in favor of attainment with larger harmony; example : when you strike a tuning fork next to one of the same key, the unstruck tuning fork begins to vibrate in resonance

Pink Noise - Harmonic Maximum; normally defined as equal energy per octave ; signal or process that appears to be the acoustic interpretation of the yin yang; each octave carries proportionate/ equal energy; sounds similar or like static depending on audio device and hearing range

Stroboscopic Effect - blurring or aliasing ; when a spin occurring so fast, it visibly appears to be choppy; example : when a wheel or helicopter blade appears to stop moving or even reverse direction

First Order - rate of either decay or acceleration (spin) applied to or in context of given field { believe its first level pinch/ unstacked uno volt, if that tracks, also not sure on this one}

Lorentz Force - the exertion of charged particle on an electromagnetic field; the summation of electric and magnetic directed/ focused point of interaction

Phi - the golden mean - the golden ration ; irrational mathematical constant; also the 21st letter of the greek alphabet; descriptive term for energy level, ex : lo-phi and hi-phi, different spelling normally but maybe same root meaning; also abbreviation for the tasteful jam band Phish ( if progressive jam noodling is your thing/ on your menu)

Manifold - topological space of infolding infinity; normal textbooks explain a z-pinch scenario ; euclidean self feeding equation of secondary effect { second order?}

Faraday - Unit of measurement for telling how much electrical current is moving thru electrolysis in either the weight of element or ionic bond at  $9.648533289 \times 104$  coulombs, or  $6.022140857 \times 1023$  electrons { per el Yandex}; amount of electric charge that it takes for one gram of equivalently of chemical reaction

Alcubierre Geometry - Proposed timespace drive layout style ; flat spacetime with sort of yin yang action where the ship or whatever would be at center point, dip below/ in front ship or object [contract or bend backwards] and / with rise above / behind ship or object (expands or bends forwards) enabling with, presumably very advanced methods of telemetry that, in theory, the outpour/ stop spot/ end location could possibly be outside what is known spacetime, via timespace entanglement, anything inside the object/ ship would , I think , perceive time in normal rate and or linear to a degree, whereas the observers on the outside maybe witness a slow creep turn into a spec on the horizon

The Dirac Equation - 1928 Paul Dirac - the way I grab it is first to really try and take a swing at sub-quantum potentials or to acknowledge or account for quantum flux; another way of seeing what it would do in action for me would be as dual singularities / pairs or sets of pairs of singularities

Boson - particle at subatomic level, fundamental of the two parts/ classes ; key or most standout factor in my mind is the nuclei has even spin ( relates to tie in of hex to pent recursive ratio or geometric alignments); gets kind of dicey but the main Aspect to me is even to odd mixture, this being even one; also postulated to be a graviton

Fermion - particle at subatomic level , fundamental of the two parts/ classes ; key or most standout factor in my mind is the nuclei has odd spin ( relates to tie in of hex to pent recursive ratio or geometric alignments); the fuzzy part where it gets obfuscation from mainstream attention, the mix of even spin and odd this being the odd is the pin to stick in this one I think; also postulated to be a graviton {?}

Cooper Pairs - two free electrons that act in tandem / within a solid to produce a quasiparticle ; way I see they would work perhaps in use would be to have individual monopole in a jelly to combine into pairing and harness longitudinal speeds/ interact with z-pinch; or water maybe another example would be water

Pocket Dimension - spatially unlimited vicinity of indiscriminate location; zipper from spacetime into separate spacetime thru some form of scalar or temporal gateway I think; few examples would be perhaps the cartoons where the scientist has a whole lab behind a mirror, or the lion the witch and the wardrobe / Alice in wonderland?

Capacitance - how much volts an object / material can hold; ability to take electric in and store before dispersal ; two plate system ( start / end?) wherein the amount of charge contained from the first, and stored before release at second plate

Centrifugal - when a force , which is spinning, pushes outward away from center point or axis; example : the tilt-o-whirl or merry-go round

Bleed-off - term from electric engineering to describe voltage that goes to waste/ falls off around devices; has been said to be visible via corona camera; also in reference to excess energy of or on other power varieties ( steam, magnetic, hydraulic etc)

Topological Physicality - maybe I'm way off but. Meaning Quantum field giving rise to dimensionality or aether into matter if you will; topology meaning network of nodes, and things or energy as a result of interaction, or removal there of if that's how you set it up perhaps

Dyson Sphere - Ideological method to harness natural energy of a star, maybe a reverse method to exploit a blackhole or whitehole , that's hyper advanced for sure; theoretic work around for energy levels needed to archive deep space exploration ( leaving z-pinch / unlimited out of picture of course)

Time Dilation - the measurable difference in time [and / or spin] between two observable subjects , caused by either a vectoring of velocity or/ and (possibly both and or combo) gravitational field potential / modification

Baryonic Symmetries - pair (or symmetric ) system (s) of dimensionality that comes into being via electric charge; set of coordinates that does not become physical until prerequisite symmetrical threshold is met; used to classify variances in gauge theory

Wonky - to have the appearance of jankiness ; being a bit off kilter; a feeling of unease or disturbance of comfortable area

Quantum Sensor - method to detect any fluctuation { presumably anything above a specific background level or normal / random occurrence} of longitudinal activity; technological equipment to scope for any / or all unauthorized pinching of the z

Kolmogorov complexity - Amount of processing power/ information needed to define or specify what an object is; parameters of linear spacetime needed to either set a constant or set constant plus acknowledgement of gain

Dielectric Condition - the state or modified (or not) condition of substance/ materials ability to withstand electric flux or store a charge, specially with function of non conductive between two plates of metal (usually, I think) ; duality aspect is what stood out to me , as in , built in Casimir effect, which lead to a mention of flux and superconductivity [which hasn't ' been discovered yet']

Edge - in specific cross correlation to/ referentially based on node(s) or limit therein of nodal array ; beginning or end / surface of something or somewhere

Node - in specific cross correlation to / referentially based towards edge(s), or singular spot of / on curvature; an intersection line ( say of energy) either curved or straight ; protrusion; also catering point of z-pinch spot

Homeopathic Magic [Aether] - utilization of etheric energy via likeness or depiction , voodoo being a prime example; aspect of effect from distance seems to be vital / standout to me here , separate function / not to be confused with homeopathic medicine ; key component to magic aspect seems to be imitation effect desired

Sympathetic Magic [ Aether] - utilization of etheric energy via a persons bitfield/ Qi/ innate energy of/ in human body and immediate surrounding area; reike, acupuncture and group meditation I believe are all good examples here; personally think the interaction of / waters ability to help send/ receive information maybe part of whats going on here, but thats total guess from the hip; another example would be FLIR footage of energy / Qi gathering in hands of bond as well [ nat geo doc from 1990s?]

Intermediate Realm - Timespace exclusive! Or only available via nonphysically ; astral record / akashic record ; liminal spaces come to mind; said to be the loading area for dreams to occur between people or people and energy; energetic space for remote viewing

Avril Eternal Realm - higher density being a key part here [ higher density being closer to source, lower energy being further away] said to be the level of

Angelic energy/ intelligence; would make it as more unity / very much simultaneous potential occurrence at one time (?)

Transverse Wave - the waves that rip the 90\* off of the longitudinal waves; wave pattern that determines / alters propagation of phase shift ; really get the picture this is the steering mechanism of directional force of given wave, as in , if a sound wave lets say , is vibrating towards something , the transverse wave is what keeps it moving from the frog, for example , to your ear; series of steps/ progression of

direction

Transmute - To take an existing state or object and make / remake into new form/ state; ideally meaning upward movement, as in , devalue/ deconstruct would be a different process; example el traditional : lead into gold , or find the silver lining (same saying?) ; traditional alchemical texts referring to isotopic transfer of elements

Parabolic Mirror - ufo saucer shaped mirror thingy where it looks like whatever you put inside is floating above it due to refraction; cross optical mirror alignment method to use parabola to seemingly move a three dimensional object

Spectrum Analysis - to take a signal strength (amplitude ) and measure against base levels or another data set; scope out frequency range on incoming / input signal; magnetometer being an example of such; argument to be made that FLIR is also a form of spectrum analysis

Hex - aka the honeycomb - indicative of implosion or ' shareable wave' { to quote Dan Winters}; naturally occurring shape used to Make structures ; beehives being prime example; root of hexadecimal, also base 16 set of mathematics , don't wanna venture too far into number land I'm not familiar with personally think there is something to the 4 by 4 sets/ 2 sets of 8 etc\*

Penta - aka pentagon/ the witch star - explosion or ' not shareable wave' [ not sure if dan winters said that but is implied from hex definition I believe] ; also destructive charge overlay seems key; specifically if needing a way to induce entropy, this would be be your culprit perhaps

Charge Distribution - the pattern of electro static as it passes into or through something; how the flow of electromagnetism is passing through another object , substance or thought; the equality of electrons though out a system

Bifield-Brown Effect - an phenomena that is said to have used the earths magnetic field with a 'secondary electrostatic effect' to exert a directed / focused force; dipole chase of positive pole perpetual motion style , I think, maybe negative loop also depending on set up; also , claim or disclaimed to have been merely ionic wind or scaled up version[ which I personally believe is obfuscation]; dielectric asymmetric lift

Picovolts - tiny ass zappers; email function of cellular communications maybe another good analogy [?] ; one trillionth of one volt; also see this as limit to what we can measure also perhaps, as in perhaps in 100 years or less we will be able to measure down to the quadrillionth and then name it something else, or maybe able to test for that low of voltage already but not publicly

Etheron - untapped aether particle; free range particle waiting to phase lock into a wave form; naked superforce before changing in the phone booth to put on the cape

Neutrino Effervescence - allegedly the particles left behind when a warp drive either engages or disembarks; unique spacetime signature of anomalous disturbance of local metric, resulting in luminous or lightning effect, detectable via either the naked eye or hypothetical methods ; sparkle area an a example { from laser experiments} I don't know for sure but maybe some form of clustering is my guess

Quantum Detector - interferometer - same class as quantum sensor?; method to eyeball any fluctuation of geomagnetic field ; example perhaps : the neutrino detectors in Antarctica are said to be capable of picking up even the slightest variance , instantly , and pinpoint within a foot allegedly

Caduceus - Hermes staff / symbol for doctors or health across all cultures [?] ; visually analogous to time/ spin ; associated with attributes of mercury; phrase for implosive spin; depiction of DNA strand with third column activated; same effectual flow the Ankh can be said to depict

Umwelt - pronounced Oom Velt; "around world" is the literal English word for word translation [ German I think] ; ecosystem based world view extent; the entirety of perception based off survival / life sustaining functionality; [huge shout to James D Madden on the Higherside chats podcast, really helped define some borders on human perception and or the limits there of personally]

Magneto-Acoustics - [MA] ' emerging ' method of health industry imaging, via contacting static magnetic field to RF flow through the body, showing up as or exerting Lorentz Force; using magnets and sonic induction perhaps , isolate anomalous / specific defects or areas to enhance ; comes first of 3 types magnetic , electric and gravity; magnetism into sound

Electro- Acoustics - energy into sound wave or the other way around; immediate example that comes to mind is the tesla coil and bluetooth speaker, directly turns any audio input into electric flow translation ; comes in second in order of firing oder of 3 types , magnetic electric and gravity

Gravity-Acoustics - gravity into sound; comes in third the firing order of acoustic effects, after the first two have cleared/ locked [?] this one is extra hot sauce spicy to even mention Imo also\*

Flavor - different models of same idea; variant highways of flocking similarity;

describing a difference or distinction within a subset or genre

Electrogravitics - study of the effect of electricity and its effects on gravity; purposefully obscured from any public success [?] not sure if that bit is accurate; the classic saucer craft, if I get how the dual field works on outer shell , would nullify the earths magnetic field/ lift or maneuver via this mechanism

Energy Density - volumetric ratio of energy capacitance to area; how much can be stored per given unit volume, as electric capacitance; not to be mixed up with unit mass , which is called Gravimetric energy density

Helicoidal Waves - Arise from formations of Scalar, or third of 3 [?] flavors of scalar; (this is a new one but wanted to take a swing at covering all variation of scalar if possible) seems to be the combination of acoustic and electromagnetic waves that either cause or form naturally a cylindrical shape at the moment when phase transition occurs ; scalar wave variant dependent on decay rate, the spin aspect of helicoidal being unique to this wave form

York Extrinsic Time - the term used for metric of spacetime moved to displace the [ Alcubierre warp ] drives placement soap to form negative pressure glide of sorts/ no resistance, in the direction you want to travel; making reference to the area of spacetime around the drive that operates via timespace

[ quantum time exclusion maybe] ; try to account for displacement of traditional time

Autodidact - individual who learns by themselves , usually via watching and / or copying someone/ or reading books, also pattern recognition , perhaps intuitive methods as well

Hopf Fibration - mathematical figure where 2D model appears to have 3D rotational axis; toroidal pattern of movement of one dimension / density , appearing overlay or spin in a higher state than based in; unit of measure / based off fiberations, continuously mapped to create what seems like an implosive highway

Fiber Bundle - synonym for Hopf Fibration; works as a unified electromagnetic and superforce bridge in function; as I see it the recentering / recursive map with enough momentum / energy build, gives rise to bonus order effects

Stator - central and stationary rod of rotary system; current applied to stator then an electric field runs across the bar, thereby changing the polarity , windings within the stator also help distribute charge; maybe pulse the charge to induce one method vs / spin around charge rod for example

Infinte Gain System - another , perhaps updated term of over unity systems; basically if you take from the well it fills back up or is always full for infinity [once system is started] example : simple but the wheel with water bottles that will spin forever and the water slosh keeps it moving, then you can take a generator and hook it up to run and then a light bulb or fan or whatever

Binaural Cascade - an audio frequential array used to activate or tune specific regions or attune or realign with sound; specifically for a variety of functions ; example : drum circle with chanting can induce this effect , copyright free style

Gravimetric Energy Density - volumetric based energy to mass term; name implies it all, how much get off the earth force can we generate per cubic centimeter, or whatever fluid conversion , or gas or whatever

Thats a bit all over the map but anything that I'm off on please would love some clarity . Also side bar bonus tossed in the Voltzstik winter test I ran a bit ago to scope out it works with snow cover, hopefully not too much at once, took a minute to form more coherently and get the info lined up

not locked in on these and for sure open to expand or retract anything thats off\*

round 4 is up to about 100 or so and i did wind up trying to group source a larger version with visuals and links and cross terms, but it got larger than was managable. so i kept rocking my version and still do \*\*
